

**Case Histories for the Meeting of Monday, January 4th 2016, 7pm**

SB 6011 David Levin; Washington Hospital
39-year-old woman with SBO.

DIAGNOSIS: _____

SB 6012 Mahendra Ranchod; Calpath
68-year-old female had a breast biopsy for a mammographic abnormality. No other diseases of note.

DIAGNOSIS: _____

SB 6013 Keith Duncan; Mills-Peninsula
67-year-old female with 2cm left posterior neck mass excision.

DIAGNOSIS: _____

SB 6014 Christine Louie/Roger Warnke; Stanford
6-month-old male presenting with vomiting and blood stools found to have intussusception.

DIAGNOSIS: _____

SB 6015 Sharon Wu/Teri Longacre; Stanford
55-year-old female with post-menopausal bleeding, found to have 1.4cm mass within fundic endometrium.

DIAGNOSIS: _____

SB 6016 Allison Zemek/John Higgins; Stanford
58-year-old female with 2.3cm cystic lesion in right kidney with mural nodular components (concerning for cystic renal cell carcinoma) and adrenal nodules.

DIAGNOSIS: _____

SB 6017 Peyman Samghabadi/Hannes Vogel/Donald Born; Stanford

57-year-old male with history of partial seizures and syncope developed acute onset of cognitive changes, confusion, disorientation, and headaches with black-out episodes. MRI with contrast revealed diffuse expansion of left parahippocampal gyrus with patchy, nodular contrast enhancement, most consistent with primary neoplasm.

DIAGNOSIS: _____

SB 6018 Jenny Hoffman/Susan Atwater; Stanford

65-year-old male with 1-year history of fever and night sweats. Subsequent imaging showed splenomegaly and left axillary lymphadenopathy.

DIAGNOSIS: _____

SB 6019 Ankur Sangoi; El Camino Hospital

Middle-aged female with incidentally-identified renal mass, excised.

DIAGNOSIS: _____

SB6020 Ankur Sangoi; El Camino Hospital

68-year-old female with recent history of appendiceal mucinous neoplasm. Now presents with mediastinal lymphadenopathy with clinical diagnosis of lymphoma.

DIAGNOSIS: _____
